# About Grip Systems

Grip Systems design and create all their products with the operator in mind. With a focus on improving the efficiency of your operations, the Grip range includes products that work together as a system to maximise your packing process.

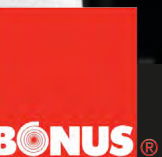

The Grip Film Magnetised Dispenser System was introduced when it was recognised how much time and effort was required to manually hand wrap a pallet, whilst posing a serious health and safety risk on the operator. The film tensioning system led to further new and innovative product developments to improve the efficiency of the whole packing operation.

The team at Grip are committed to a sustainable future, striving to meet the needs of businesses whilst protecting the environment and promoting the use of sustainable resources. They are continuously adding to and developing their Eco range, helping customers reduce waste and improve the sustainability of their packaging.

“

The Grip Film system is proven to be 40% more efficient than traditional hand wrapping methods...

”
